

**ABSTRACT OF THE DISCLOSURE**

The Crystal form P of a compound of formula (I)

having 2-theta angle positions in the powder X-ray diffraction pattern of  $6.6^\circ$  and  $6.5^\circ$ , Crystal form D of the compound having 2-theta angle positions in the powder X-ray diffraction pattern of  $7.1^\circ$ ,  $13.5^\circ$  and  $14.2^\circ$ ; and Crystal form D X-hydrate of the compound having 2-theta angle positions in the powder X-ray diffraction pattern of  $7.1^\circ$  and  $14.2^\circ$ . These compounds are useful as pharmaceutical materials because of their low residual solvent level, high stability, and ease of handling.
